Hello Harry,

This is just a short note to tell you that I installed the Enigma decalcifier into my pool's filtration system and connected the electrics into the motor. Every time the motor runs the Enigma unit kicks in and although the filtration system is only running for about 5 hours per day I have been pleasantly surprised to see a marked decrease in the calcium (lime) level in the water.

The pool is filled exclusively from my borehole and it is sparkling clear.

I have also been using less chlorine and in these past few weeks where the temperature in our village often exceeds 40 degrees there has been absolutely no sign of algae in the water.

Congratulations on marketing a machine that really works. Keep up the good work.

I have attached 2 pictures to show you how the unit is installed.

Kind Regards

Roy Honeyborne
